Interactive Demo Link

https://rafeeeq.netlify.app/

Objective

The purpose of this demo is to provide an interactive way to showcase the project functionality and demonstrate how the system processes different examples from our dataset.

Technical Note

The demo is a **dataset-driven frontend prototype** and is not connected to a backend API. It uses pre-prepared examples from our dataset.

Note

Each time you return to the start page and restart the demo, a new example will be displayed automatically from the available dataset samples.
